CSCM10 Research Methodology A Taster of LATEX

Anton Setzer

 $http://www.cs.swan.ac.uk/\sim csetzer/lectures/\\ computerScienceProjectResearchMethods/current/index.html$

October 22, 2017

Advantages/Disadvantages of WYSIWYG Systems

- WYSIWYG systems are relatively easy to use.
- In WYSIWYG systems typesetting to be done by the user.
 - Problem: most users are not professional type setters.
- In most systems (e.g. Word) you can see only the output, but not the formatting information.
 - Difficult to detect that one headline is in 11 pt and another in 12 pt, or one headline in one font, and another in a slightly different font.
 - Therefore output is usually inconsistent.
- Usually output not of printable quality.
- Programming is difficult, definition of macros restricted and difficult.

WYSIWYG Systems

- WYSIWYG = "What You See Is What You Get".
- What you type in can be seen directly on the screen.
- Microsoft Office Word is the main example of a WYSIWYG system.

CSCM10 Lecture 4, 11/2/16: LATEX

2/32

WYSIWYM

- WYSIWYM = "What You See Is What You Mean".
- Instead of doing the typesetting directly the user says:
 - This is a headline.
 - This is a section title.
 - This text is normal text.
 - This is a mathematical formula
- Main examples: TFX and LATFX.

CSCM10 Lecture 4, 11/2/16: LATEX 3/ 32 CSCM10 Lecture 4, 11/2/16: LATEX 4/ 32

Advantages/Disadvantages of WYSIWYM Systems

- Steeper learning curve.
- Separation of output from input, therefore what you write needs to be compiled into text.
- Can create text in print quality.
 - Many publishers print articles typeset in LATEX directly, or after adding their own generic macros.
- User sees all formatting information and can therefore produce very uniform text.
- Programmable using macros.
 - Development of macro packages for many purposes.
 - In LATEX macro packages e.g. for chess, for typesetting proofs, chemical formulas exist.
 - These slides are typeset in LATEX.

CSCM10 Lecture 4, 11/2/16: LATEX 5/ 32

Use of LATEX for Reports and Dissertation

- Reports and dissertations can be written using any text processing system.
- Use of LATEX will in many cases give you an advantage because of the much higher quality of the output.
- Many lecturers (but not all) use LATEX, especially for scientific publishing.
 - They might help you with LATEX.

MTEX

- TEX developed by Donald Knuth in order to typeset a new version of his books "The art of Computer Programming".
- LATEX (for Lamport-TEX) developed by Laslie Lamport in order to make a more user friendly version of TEX.
 - LATEX is essentially a macro package on top of TEX.

CSCM10 Lecture 4, 11/2/16: LATEX 6/ 32

Example

- The following shows an example of LATEX code (split into 3 codes) plus the output.
- For ease of presentation after each code piece the final output (which is only produced after running latex on the whole code) is shown.
- The source for this file is available from the webpage for the lectures by Anton Setzer for this module or here: http://www.cs.swan.ac.uk/~csetzer/lectures/ computerScienceProjectResearchMethods/current/latex/exampleWike

CSCM10 Lecture 4, 11/2/16: LATEX 7/ 32 CSCM10 Lecture 4, 11/2/16: LATEX 8/ 32

Example

```
\documentclass[12pt]{article}
\usepackage{amsmath}
\title{\LaTeX}
\author{Anton Setzer
  \thanks{Dept. of Computer Science,
    Swansea University, Singleton Park,
    Swansea SA1 4PZ, UK.
    Email: {\tt a.g.setzer@swan.ac.uk}.
    This article is based on the example in Wikipedia,
    http://en.wikipedia.org/wiki/LaTeX}}
\date{7 October 2011}
\newcommand{\role}{{r\^{o}le}}
\begin{document}
    maketitle
```

Example (Continued)

\LaTeX{} is a document preparation system for the \TeX{} typesetting program. It offers programmable desktop publishing features and extensive facilities for automating most aspects of typesetting and desktop publishing, including numbering and cross-referencing, tables and figures, page layout, bibliographies, and much more.
\LaTeX{} was originally written in 1984 by Leslie Lamport and has become the dominant method for using \TeX; few people write in plain \TeX{} anymore.
The current version is \LaTeXe.
\LaTeX{} plays an important \role{} in publishing

17/ 32

More Details

• \thanks{Dept. of Computer Science, Swansea University, Singleton Park, Swansea SA1 4PZ, UK. Email: {\tt a.g.setzer@swan.ac.uk}. This article is based on the example in Wikipedia, http://en.wikipedia.org/wiki/LaTeX}}

- Footnote added to author.
- $\{\t tt \cdots \}$ type sets this part in type writer font.
- Second "}" finishes definition of author.

\date{7 October 2011}

Defines the date.

More Details

- \documentclass[12pt]{article}
 - Standard Header of a Latex file.
 - 12pt = font size
 - article = style

(Article is suitable for reports.

There are lots of other styles.

Style "book" is the simplest style for dissertations.

- There are many more fancy ones.)
- \usepackage{amsmath}
 - Loads package amstmath.
 - Rich package for mathematics, here used for command \frac.
 - Lots of packages are available.
- \title{\LaTeX}
 - Defines the title.
 - \LaTeX{} is a macro typesetting LATEX.
- \author{Anton Setzer
 - Starts defining the author (note { not closed yet)

CSCM10

Lecture 4, 11/2/16: LATEX

18/ 32

More Details

- \newcommand{\role}{{r\^{o}le}}
 - Defines a macro.
 - From now on \role will expand to {r\^{o}le}.
 - Curly brackets will be used to group text but will not be printed.
 - \^{o} typesets ô
 - There are macros for defining lots and lots of special symbols.
 - http://www.tug.org/tex-archive/info/symbols/comprehensive/
 - Macros can have parameters as well.

More Details

- \begin{document}
 - Start of the content of the document.
- \maketitle
 - Puts title, author, date at this position.
 - Without this command no title, author, date will occur in the document.

CSCM10

Lecture 4, 11/2/16: LATEX

21/32

More Details

• \LaTeX{} is a document preparation system for the

• Line breaks in the text create only space between words.

• Several blanks, tabs, line breaks are the same as a single space

\TeX{} typesetting program. It offers ···

(Equivalently one can use the macro \par).

• This is standard text to be typeset.

• Aligning the text done by the system.

• Double line breaks creates a paragraph

(except for double line breaks).

• \TeX{} typesets T_FX.

More Details

- \LaTeX{} plays an important \role{} in publishing
 - Here the user defined macro \role{} typeset as rôle is used.
 - {} here makes sure that there is a blank after LATEX and after rôle.

Spaces after a macro are ignored.

- % This is a comment; it will not be shown
 - Everything in a a line after % is a comment

CSCM10

Lecture 4, 11/2/16: LATEX

22/32

Example (Continued)

- \begin{align} \end{align}
 - Example of an environment.
 - There are many environments in LATEX.

Lecture 4, 11/2/16: LATEX CSCM10 23/32 CSCM10 Lecture 4, 11/2/16: LATEX 24/32

Example (Continued)

- \begin{align}
 ...&...\\
 ...&...\\
 \end{align}
 - Environment align typesets several formulae, which are numbered as (1), (2) consecutively.
 - Content of an align environment is mathematical text.
 - LATEX and TEX have a text mode and a formula mode.
 - In formula mode different macros (usually for creating mathematical text) are used.
 - In mathematical text all blanks are ignored.
 - Mathematical text is where the full power of LATEX/TEXis shown.
 - Seems to be the easiest system for typesetting formulae.
 - \\ separates lines in mathematical text (can be used for ordinary text as well).
 - Symbols & mark positions to be aligned.

CSCM10

Lecture 4, 11/2/16: LATEX

25/ 32

LATEX under Windows

- Use any text editor. Recommended: Emacs or XEmacs.
- MikTeX is a LATEX compiler for Windows.
- For viewing dvi files use the included YAP dvi-viewer.
- For postscript use GhostScript + GSView.
- See for instance http://www.pinteric.com/miktex.html on how to use LATEX under Windows.
- Other onlinetools avilable e.g. ShareLatex.

Example (Continued)

- c^2
 - Typesets c^2 in mathematical text.
- *m*_0.
 - Typesets m_0 in mathematical text.
- $\frac{\cdot}{\cdot}$
 - Type sets a fraction :::.
 - Note that we can nest fractions.
- \sqrt{···}
 - Typesets $\sqrt{\cdots}$.
- \end{align}
 - End of align environment.
- \end{document}
 - End of the document.
 - Text after this will be ignored.

CSCM10

Lecture 4, 11/2/16: LATEX

26/32

BibTex

- BibTex allows to create your bibliography automatically from a BibTex file, in which bibliography entries are listed in a database like syntax.
- Publishers and many authors provide BibTex entries for many publication.
- Google scholar can be adjusted through settings to provide BibTeX entries - however there usually need a lot of adjustments.

CSCM10 Lecture 4, 11/2/16: LATEX 27/32 CSCM10 Lecture 4, 11/2/16: LATEX 28/32

Example BibTeX entry

```
 \begin{tabular}{ll} @book\{kopka2003guide, & title=\{Guide\ to\ \{L\}a\{T\}a\{X\}\}, & author=\{Kopka,\ H.\ and\ Daly,\ P.W.\}, & edition=\{4\}, & year=\{2003\}, & publisher=\{Addison-Wesley\} \\ \end{tabular}
```

CSCM10

Lecture 4, 11/2/16: LATEX

29/32

Some Books

- Helmut Kopka, Partrick W. Daly: Guide to LaTeX (Tools and Techniques for Computer Type Settings. Addision-Wesley 4th edition, 2003.
- Leslie Lamport: LaTeX: A document prperation system. User's guide and Reference manual. Addison Wesley, 1994.
- Frank Mittelbach, Michel Goossens: The Latex companion. Addison Wesley, 2nd Edition, 2004.
- Michel Goossens, Frank Mittelbach: The Latex Graphics companion. Addison Wesley, 2nd Edition, 2007.

Example BibTeX entry

- We wrote {L}a{T}a{X}, because BibTeX puts by default everything in lowercase in titles, except for the first character.
 By using {L} one forces L to be taken as a capital letter.
- Many more fields available, many are optional.
- Fields vary depending on the type.
 - Here type is book as indicated by @book.
 - Examples of types are article, misc, unpublished, inproceedings, proceedings, PhDthesis, and many more.
- This item can now be cited using \cite{kopka2003guide}.
- BibTeX entries are stored in a file with extension .bib
- The bibliography is incorparted into your LaTeX document by using the commands:

\bibliographystyle{abbrvnat} \bibliography{bibtexfilename}

- There are many different bibliographystyles available.
- bibtexfilename is the name of your BiBTeX file.

CSCM10

Lecture 4, 11/2/16: LATEX

30/ 32

More Documentation

- Lots of documentation on LATEX (tutorials, userguides etc) available online.
- Links available on the module home page at http://www.cs.swan.ac.uk/~csetzer/lectures/ computerScienceProjectResearchMethods/current/index.html
