

# CSCM10 Research Methodology

## A Taster of L<sup>A</sup>T<sub>E</sub>X

Anton Setzer

[http://www.cs.swan.ac.uk/~csetzer/lectures/  
computerScienceProjectResearchMethods/current/index.html](http://www.cs.swan.ac.uk/~csetzer/lectures/computerScienceProjectResearchMethods/current/index.html)

October 22, 2017

- WYSIWYG = “**W**hat **Y**ou **S**ee **I**s **W**hat **Y**ou **G**et”.
- What you type in can be seen directly on the screen.
- **Microsoft Office Word** is the main example of a WYSIWYG system.

# Advantages/Disadvantages of WYSIWYG Systems

- WYSIWYG systems are relatively easy to use.
- In WYSIWYG systems typesetting to be done by the user.
  - Problem: most users are not professional type setters.
- In most systems (e.g. Word) you can see only the output, but not the formatting information.
  - Difficult to detect that one headline is in 11 pt and another in 12 pt, or one headline in one font, and another in a slightly different font.
  - Therefore output is usually inconsistent.
- Usually output not of printable quality.
- Programming is difficult, definition of macros restricted and difficult.

- WYSIWYM = “**W**hat **Y**ou **S**ee **I**s **W**hat **Y**ou **M**ean”.
- Instead of doing the typesetting directly the user says:
  - This is a headline.
  - This is a section title.
  - This text is normal text.
  - This is a mathematical formula
- Main examples:  $\text{T}_E\text{X}$  and  $\text{L}_A\text{T}_E\text{X}$ .

# Advantages/Disadvantages of WYSIWYM Systems

- Steeper learning curve.
- Separation of output from input, therefore what you write needs to be compiled into text.
- Can create text in print quality.
  - Many publishers print articles typeset in  $\text{\LaTeX}$  directly, or after adding their own generic macros.
- User sees all formatting information and can therefore produce very uniform text.
- Programmable using macros.
  - Development of macro packages for many purposes.
    - In  $\text{\LaTeX}$  macro packages e.g. for chess, for typesetting proofs, chemical formulas exist.
    - These slides are typeset in  $\text{\LaTeX}$ .

- T<sub>E</sub>X developed by Donald Knuth in order to typeset a new version of his books “The art of Computer Programming”.
- L<sup>A</sup>T<sub>E</sub>X (for **L**amport-**T**E<sub>X</sub>) developed by Laslie Lamport in order to make a more user friendly version of T<sub>E</sub>X.
  - L<sup>A</sup>T<sub>E</sub>X is essentially a macro package on top of T<sub>E</sub>X.

# Use of $\text{\LaTeX}$ for Reports and Dissertation

- Reports and dissertations can be written using any text processing system.
- Use of  $\text{\LaTeX}$  will in many cases give you an advantage because of the much higher quality of the output.
- Many lecturers (but not all) use  $\text{\LaTeX}$ , especially for scientific publishing.
  - They might help you with  $\text{\LaTeX}$ .

# Example

- The following shows an example of  $\text{\LaTeX}$  code (split into 3 codes) plus the output.
- For ease of presentation after each code piece the final output (which is only produced after running latex on the whole code) is shown.
- The source for this file is available from the webpage for the lectures by Anton Setzer for this module or here:  
<http://www.cs.swan.ac.uk/~csetzer/lectures/computerScienceProjectResearchMethods/current/latex/exampleV>

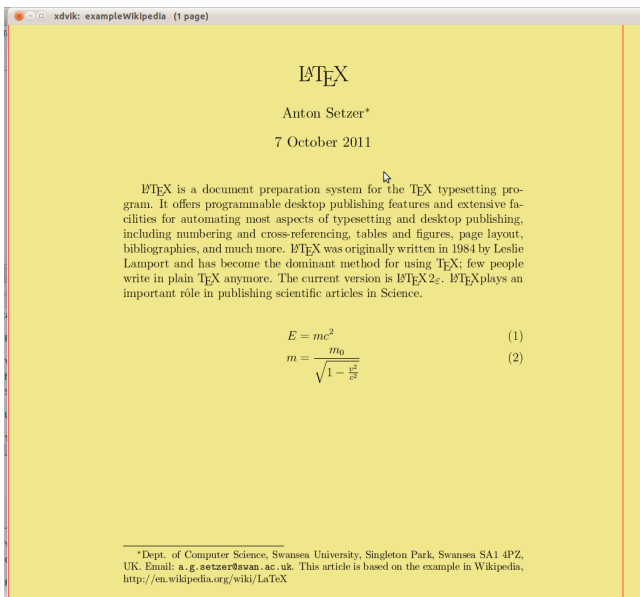

# Example

```
\documentclass[12pt]{article}
\usepackage{amsmath}
\title{\LaTeX}
\author{Anton Setzer
  \thanks{Dept. of Computer Science,
    Swansea University, Singleton Park,
    Swansea SA1 4PZ, UK.
    Email: {\tt a.g.setzer@swan.ac.uk}.
    This article is based on the example in Wikipedia,
    http://en.wikipedia.org/wiki/LaTeX}}
\date{7 October 2011}

\newcommand{\role}{{r\^{o}le}}

\begin{document}
\maketitle
```

L<sup>A</sup>T<sub>E</sub>X

Anton Setzer\*

7 October 2011

L<sup>A</sup>T<sub>E</sub>X is a document preparation system for the T<sub>E</sub>X typesetting program. It offers programmable desktop publishing features and extensive facilities for automating most aspects of typesetting and desktop publishing, including numbering and cross-referencing, tables and figures, page layout, bibliographies, and much more. L<sup>A</sup>T<sub>E</sub>X was originally written in 1984 by Leslie Lamport and has become the dominant method for using T<sub>E</sub>X; few people write in plain T<sub>E</sub>X anymore. The current version is L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>. L<sup>A</sup>T<sub>E</sub>X plays an important rôle in publishing scientific articles in Science.

$$E = mc^2 \tag{1}$$
$$m = \frac{m_0}{\sqrt{1 - \frac{v^2}{c^2}}} \tag{2}$$

---

\*Dept. of Computer Science, Swansea University, Singleton Park, Swansea SA1 4PZ, UK. Email: [a.g.setzer@swan.ac.uk](mailto:a.g.setzer@swan.ac.uk). This article is based on the example in Wikipedia, <http://en.wikipedia.org/wiki/LaTeX>

## Example (Continued)

`\LaTeX{}` is a document preparation system for the `\TeX{}` typesetting program. It offers programmable desktop publishing features and extensive facilities for automating most aspects of typesetting and desktop publishing, including numbering and cross-referencing, tables and figures, page layout, bibliographies, and much more.

`\LaTeX{}` was originally written in 1984 by Leslie Lamport and has become the dominant method for using `\TeX`; few people write in plain `\TeX{}` anymore. The current version is `\LaTeXe`.

`\LaTeX{}` plays an important `\role{}` in publishing scientific articles in Science.

`% This is a comment; it will not be shown`  
`% in the final output.`

L<sup>A</sup>T<sub>E</sub>X

# More Details

- `\documentclass[12pt]{article}`
  - Standard Header of a Latex file.
  - 12pt = font size
  - article = style  
(Article is suitable for reports.  
There are lots of other styles.  
Style “book” is the simplest style for dissertations.  
– There are many more fancy ones.)
- `\usepackage{amsmath}`
  - Loads package amstmath.
  - Rich package for mathematics, here used for command `\frac`.
  - Lots of packages are available.
- `\title{\LaTeX}`
  - Defines the title.
  - `\LaTeX{}` is a macro typesetting  $\text{\LaTeX}$ .
- `\author{Anton Setzer}`
  - Starts defining the author (note `{` not closed yet)

- `\thanks{Dept. of Computer Science,  
Swansea University, Singleton Park,  
Swansea SA1 4PZ, UK.  
Email: {\tt a.g.setzer@swan.ac.uk}}.`  
This article is based on the example in  
Wikipedia,  
`http://en.wikipedia.org/wiki/LaTeX}}`
  - Footnote added to author.
  - `{\tt ... }` type sets this part in type writer font.
  - Second “`}`” finishes definition of author.
- `\date{7 October 2011}`
  - Defines the date.

- `\newcommand{\role}{\{r\^{\o}le}}`
  - Defines a macro.
  - From now on `\role` will expand to `{r\^{\o}le}`.
  - Curly brackets will be used to group text but will not be printed.
  - `\^{\o}` typesets  $\hat{o}$
  - There are macros for defining lots and lots of special symbols.
  - <http://www.tug.org/tex-archive/info/symbols/comprehensive/>
  - Macros can have parameters as well.

- `\begin{document}`
  - Start of the content of the document.
- `\maketitle`
  - Puts title, author, date at this position.
  - Without this command no title, author, date will occur in the document.

- `\LaTeX{}` is a document preparation system for the `\TeX{}` typesetting program. It offers ...
  - This is standard text to be typeset.
  - Aligning the text done by the system.
  - Line breaks in the text create only space between words.
  - Double line breaks creates a paragraph (Equivalently one can use the macro `\par`).
  - Several blanks, tabs, line breaks are the same as a single space (except for double line breaks).
  - `\TeX{}` typesets `TEX`.

- `\LaTeX{} plays an important \role{} in publishing`
  - Here the user defined macro `\role{} typeset as rôle` is used.
  - `{}` here makes sure that there is a blank after `\LaTeX` and after `rôle`.  
Spaces after a macro are ignored.
- `% This is a comment; it will not be shown`
  - Everything in a line after `%` is a comment

## Example (Continued)

- `\begin{align}`

...

`\end{align}`

- Example of an environment.
- There are many environments in  $\text{\LaTeX}$ .

## Example (Continued)

- `\begin{align}`  
...&...\\  
...&...\\  
`\end{align}`
  - Environment `align` typesets several formulae, which are numbered as (1), (2) consecutively.
  - Content of an `align` environment is mathematical text.
    - $\text{\LaTeX}$  and  $\text{\TeX}$  have a text mode and a formula mode.
    - In formula mode different macros (usually for creating mathematical text) are used.
    - In mathematical text all blanks are ignored.
    - Mathematical text is where the full power of  $\text{\LaTeX}/\text{\TeX}$  is shown.
    - Seems to be the easiest system for typesetting formulae.
  - `\\` separates lines in mathematical text (can be used for ordinary text as well).
  - Symbols `&` mark positions to be aligned.

## Example (Continued)

- `c^2`
  - Typesets  $c^2$  in mathematical text.
- `m_0`.
  - Typesets  $m_0$  in mathematical text.
- `\frac{\dots}{\dots}`
  - Type sets a fraction  $\frac{\dots}{\dots}$ .
  - Note that we can nest fractions.
- `\sqrt{\dots}`
  - Typesets  $\sqrt{\dots}$ .
- `\end{align}`
  - End of align environment.
- `\end{document}`
  - End of the document.
  - Text after this will be ignored.

- Use any text editor. Recommended: Emacs or XEmacs.
- MikTeX is a L<sup>A</sup>T<sub>E</sub>X compiler for Windows.
- For viewing dvi files use the included YAP dvi-viewer.
- For postscript use GhostScript + GSView.
- See for instance  
<http://www.pinteric.com/miktex.html>  
on how to use L<sup>A</sup>T<sub>E</sub>X under Windows.
- Other onlinetools available e.g. ShareLatex.

- BibTeX allows to create your bibliography automatically from a BibTeX file, in which bibliography entries are listed in a database like syntax.
- Publishers and many authors provide BibTeX entries for many publication.
- Google scholar can be adjusted through settings to provide BibTeX entries - however there usually need a lot of adjustments.

## Example BibTeX entry

```
@book{kopka2003guide,  
  title={Guide to {L}a{T}e{X}},  
  author={Kopka, H. and Daly, P.W.},  
  edition={4},  
  year={2003},  
  publisher={Addison-Wesley}  
}
```

## Example BibTeX entry

- We wrote `{L}a{T}a{X}`, because BibTeX puts by default everything in lowercase in titles, except for the first character. By using `{L}` one forces L to be taken as a capital letter.
- Many more fields available, many are optional.
- Fields vary depending on the type.
  - Here type is book as indicated by `@book`.
  - Examples of types are article, misc, unpublished, inproceedings, proceedings, PhDthesis, and many more.
- This item can now be cited using `\cite{kopka2003guide}`.
- BibTeX entries are stored in a file with extension `.bib`
- The bibliography is incorporated into your LaTeX document by using the commands:

```
\bibliographystyle{abbrvnat}
\bibliography{bibtexfilename}
```

  - There are many different bibliographystyles available.
  - `bibtexfilename` is the name of your BiBTeX file.

# Some Books

- Helmut Kopka, Partrick W. Daly: Guide to LaTeX (Tools and Techniques for Computer Type Settings. Addison-Wesley 4th edition, 2003.
- Leslie Lamport: LaTeX: A document preparation system. User's guide and Reference manual. Addison Wesley, 1994.
- Frank Mittelbach, Michel Goossens: The Latex companion. Addison Wesley, 2nd Edition, 2004.
- Michel Goossens, Frank Mittelbach: The Latex Graphics companion. Addison Wesley, 2nd Edition, 2007.

# More Documentation

- Lots of documentation on  $\LaTeX$  (tutorials, userguides etc) available online.
- Links available on the module home page at <http://www.cs.swan.ac.uk/~csetzer/lectures/computerScienceProjectResearchMethods/current/index.html>
